

# SUGGESTIONS FOR RARITONE

**Raritone Summer Internship 2026**

**Name: Praneetha Ayyana Somayajulu**

**Role: AI/ML Intern**

**Date: 05/06/2026**

## Introduction

The Raritone Summer Internship 2026 provided valuable exposure to Artificial Intelligence, Computer Vision, Virtual Try-On technologies, and research-based learning. The internship offered opportunities to explore emerging technologies, develop technical skills, and gain practical understanding of modern AI applications.

The following suggestions are provided with the intention of supporting future internship programs and enhancing the learning experience for upcoming interns.

## Suggestions

### 1. Provide Initial Orientation Sessions

A detailed orientation session at the beginning of the internship would help interns better understand the project objectives, expected outcomes, technologies involved, and overall workflow.

This would reduce initial confusion and help interns begin their tasks more efficiently.

### 2. Share Learning Resources Early

Providing recommended learning materials, documentation links, research papers, and tutorial resources at the start of the internship would help interns quickly become familiar with unfamiliar technologies.

This would allow more time for practical exploration and research activities.

### 3. Conduct Periodic Technical Mentoring Sessions

Regular mentoring sessions would provide interns with opportunities to clarify doubts, discuss progress, and receive technical guidance.

These sessions could improve learning outcomes and encourage greater interaction between mentors and interns.

### 4. Introduce More Hands-On Activities

Research tasks were highly beneficial for understanding concepts. Adding additional implementation-based activities and small practical projects would provide interns with more opportunities to apply their knowledge in real-world scenarios.

This would strengthen both theoretical understanding and practical skills.

### 5. Provide Sample Datasets and Project Resources

Providing sample datasets, asset repositories, and project templates at the beginning of the internship would help interns focus more on research and experimentation rather than spending significant time searching for resources.

### 6. Encourage Collaborative Learning

Creating opportunities for interns to share findings, present research outcomes, and collaborate on common topics would enhance teamwork and knowledge sharing.

Group discussions and presentation sessions could help interns learn from each other's experiences.

### 7. Introduce Cloud-Based Computing Resources

Some advanced AI technologies require significant computational resources. Providing access to cloud-based GPU environments or shared computing resources would allow interns to explore more advanced AI models and experiments.

## 8. Organize Final Project Demonstrations

A final project presentation session would allow interns to showcase their work, explain their findings, and demonstrate what they learned throughout the internship.

This would also encourage confidence, communication skills, and professional presentation abilities.

## Overall Feedback

The internship provided a valuable learning experience and introduced several modern technologies related to Artificial Intelligence, Computer Vision, Virtual Try-On systems, and 3D Avatar Generation. The structured tasks encouraged independent research, technical exploration, and documentation skills.

The internship successfully helped develop both technical and professional skills while providing exposure to emerging technologies and real-world applications.

## Conclusion

I would like to express my gratitude to the Raritone team for providing this learning opportunity. The internship helped me gain knowledge in Artificial Intelligence, Computer Vision, Virtual Try-On technologies, and technical research. The experience contributed significantly to my learning journey and professional development.

I appreciate the guidance, support, and opportunities provided throughout the internship and look forward to applying the knowledge gained in future academic and professional projects.
